

# EXPRESSIONS SHELVING SHAPER

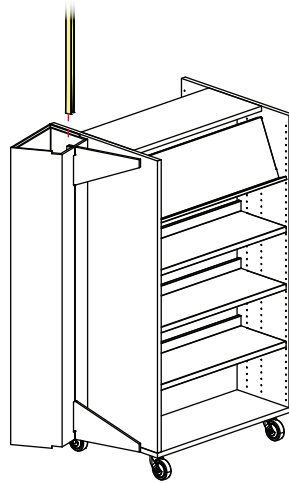

1

Align the shaper to the top edge of the expressions and using a drill and self tapping screws, securely fasten it into the side of the expressions bay

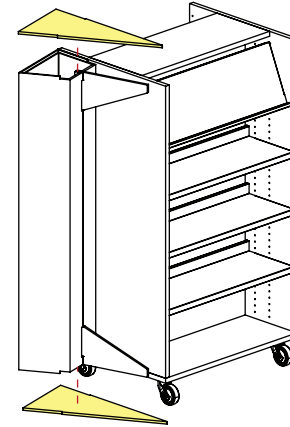

2

Fold the shapper via the pre-cut grooves as pictured above. Slide the top and bottom supports into the exposed gaps as shown.

3

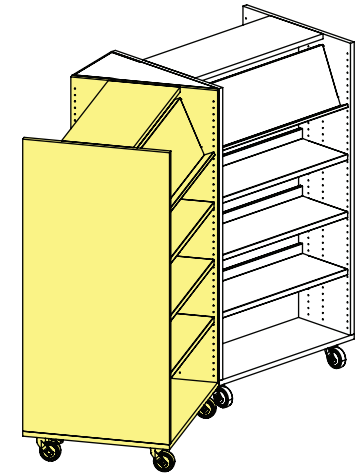

Slide the aluminium extrusion via the pre-cut channels, down the entire length of the shapper, locking the shaper closed.

4

Insert the top and bottom caps into the pre-notched groove on the top and bottom.

\*Bottom cap can be kept as a spare for top as it is unseen.

5

Butt the adjacent expressions bay to the installed shaper. Do not fix the shaper to the adjacent expressions unit to prevent damage if relocated.
